Description of conic	Standard form of equation	Graph
circle	$x^2 + y^2 = r^2$	ellipse	$\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$	
(a) major axis on x-axis ("wide and short")	$(a > b)$	(b) major axis on y-axis ("tall and narrow")	$(a < b)$	hyperbola		
(a) transverse axis on x-axis (opens left and right)	$\frac{x^2}{a^2} - \frac{y^2}{b^2} = 1$	(b) transverse axis on y-axis (opens up and down)	$\frac{y^2}{b^2} - \frac{x^2}{a^2} = 1$	parabola		
(a) opens up	$y = \frac{x^2}{4p}$	(b) opens down	$y = \frac{-x^2}{4p}$	(c) opens right	$x = \frac{y^2}{4p}$	(d) opens left	$x = \frac{-y^2}{4p}$
